

HTML/CSS Portfolio Assignment

Purpose

This assignment is designed to refresh your knowledge of HTML and CSS, while applying what you have just learned about basic design principles.

Exercise

A portfolio website is an essential tool to getting more business and building your professional brand. In today's digital world, a portfolio is arguably more important than a resume, no matter what industry you work in. Whether you are a recent college grad looking for a job, an accountant, or even a senior engineer, when people Google your name, your portfolio will provide the most powerful and comprehensive perspective on you. You are expected to apply your HTML and CSS skills to create a professional, nicely formatted online portfolio to show your work and skills. You should include your picture, a short bio of yourself (maybe by connecting to your social media accounts such as LinkedIn, Facebook, Twitter) and any other media (image, audio, and video) you wish to include. It's also important that your portfolio's design displays your competencies. Use colors, typefaces and design to connect with your target audience.

Design Considerations

- Keep in mind the key points that you learned about design principals
- Usability
- Navigation
- Color choices
- Also make sure your site works and looks good on all different search engines and across different browsers

Resources

- <http://w3schools.com>
- Course slides
- Recommended text books

Constraints

- Design and create at least two pages, in order to demonstrate your ability to link multiple pages
- Provide at least one image or any other media type
- DO NOT use any type of CMS to create this site
- Images and other media used must be either your own work or open licensed – PROVIDE REFERENCE FOR ALL MEDIA
- Do not copy code from the above resources – TRY TO BE INNOVATIVE

Submission Guidelines

- All code and media files zipped into one file, including (but not limited to):
 - .html files
 - .css file(s)
 - image/media files
 - directory structure

Evaluation

Marks are given for the uniqueness, beauty and application of your design based on the principles discussed in class. Marks will also be deducted for any constraints that is not satisfied, or errors with your HTML or CSS code.
